## Nuclear Weapons: Comprehensive Test Ban Treaty

### SUMMARY

A comprehensive test ban treaty, or CTBT, is the oldest item on the nuclear arms control agenda. Three treaties currently limit testing to underground only, with a maximum force equal to 150,000 tons of TNT. According to the Natural Resources Defense Council, the United States conducted 1,030 nuclear tests, the Soviet Union 715, the United Kingdom 45, France 210, and China 45. The last U.S. test was held in 1992; the last U.K. test, in 1991. Russia claims it has not conducted nuclear tests since 1991.

Since 1997, the United States has held 21 “subcritical experiments” at the Nevada Test Site, most recently on May 25, 2004, to study how plutonium behaves under pressures generated by explosives. It asserts these experiments do not violate the CTBT because they cannot produce a self-sustaining chain reaction. Russia has reportedly held some since 1998, including several in 2000.

In May 1998, India and Pakistan each announced several nuclear tests and declared themselves nuclear weapons states. Each declared a moratorium on further tests, but separately stated, in the summer of 2000, that the time was not right to sign the CTBT.

The U.N. General Assembly adopted the CTBT in September 1996. As of January 19, 2005, 176 states had signed it; 126, including Russia, had ratified; 41 of the 44 states that must ratify the treaty for it to enter into force had signed; and 33 of the 44 had ratified. Four conferences have been held to facilitate entry into force of the treaty; most recently in September 2005.

In 1997, President Clinton transmitted the CTBT to the Senate. On October 13, 1999,

the Senate rejected the treaty, 48 for, 51 against, 1 present. It is now on the Senate Foreign Relations Committee’s calendar. It would require a two-thirds Senate vote to send the treaty back to the President for disposal or to give advice and consent for ratification; few see either event as likely.

In January 2002 the Administration, in briefings on the Nuclear Posture Review, indicated that it continues to oppose the CTBT, continues to adhere to the test moratorium, is considering modifying existing warheads for use against hard and deeply-buried targets, has not ruled out resumed testing, and has no plans to test. These positions remain current. It also indicated plans to reduce the time between a decision to conduct a nuclear test and the test itself, which is being done. Critics raised concerns about the implications of these policies for testing and new weapons. Congress addresses nuclear weapon issues in the annual National Defense Authorization Act and the Energy and Water Development Appropriations Act.

Congress continues to consider the Stockpile Stewardship Program, which seeks to maintain nuclear weapons without testing. The appropriation for the program (Weapons Activities) was \$5.429 billion for FY2002, \$5.954 billion for FY2003, and \$6.273 billion for FY2004. The Consolidated Appropriations Act, 2005 provided \$6.526 billion for Weapons Activities and \$19.0 million to fund the U.S. contribution to a global system for monitoring events that might violate the treaty. The FY2006 request was \$6.630 billion for Weapons Activities, and \$14.4 million for the monitoring system. The appropriations for these programs were \$6.434 billion and \$14.4 million, respectively.

## MOST RECENT DEVELOPMENTS

On December 22, an Indian government official said, “India has stated that it will not stand in the way of the Entry into Force of the [Comprehensive Test Ban] Treaty.” On December 8, the U.N. General Assembly adopted, 168-2, with 7 abstentions, a resolution sponsored by Japan, “Renewed Determination Towards the Total Elimination of Nuclear Weapons,” that, among other things, urged nations to ratify the CTBT and continue nuclear test moratoria. On December 1, Haiti became the 126<sup>th</sup> nation to ratify the CTBT. The fourth conference on facilitating CTBT entry into force was held September 21-23 at U.N. Headquarters in New York.

## BACKGROUND AND ANALYSIS

### History

A ban on nuclear testing is the oldest item on the arms control agenda. Efforts to curtail tests have been made since the 1940s. In the 1950s, the United States and Soviet Union conducted hundreds of hydrogen bomb tests. The radioactive fallout from these tests spurred worldwide protest. These pressures, plus a desire to reduce U.S.-Soviet confrontation after the Cuban Missile Crisis of 1962, led to the Limited Test Ban Treaty of 1963, which banned nuclear explosions in the atmosphere, in space, and under water. The Threshold Test Ban Treaty, signed in 1974, banned underground nuclear weapons tests having an explosive force of more than 150 kilotons, the equivalent of 150,000 tons of TNT, ten times the force of the Hiroshima bomb. The Peaceful Nuclear Explosions Treaty, signed in 1976, extended the 150-kiloton limit to nuclear explosions for peaceful purposes. President Carter did not pursue ratification of these treaties, preferring to negotiate a comprehensive test ban treaty, or CTBT, a ban on all nuclear explosions. When agreement seemed near, however, he pulled back, bowing to arguments that continued testing was needed to maintain reliability of existing weapons, to develop new weapons, and for other purposes. President Reagan raised concerns about U.S. ability to monitor the two unratified treaties and late in his term started negotiations on new verification protocols. These two treaties were ratified in 1990.

With the end of the Cold War, the need for improved warheads dropped and pressures for a CTBT grew. The U.S.S.R. and France began nuclear test moratoria in October 1990 and April 1992, respectively. In early 1992, many in Congress favored a one-year test moratorium. The effort led to the Hatfield amendment to the FY1993 Energy and Water Development Appropriations Bill, which banned testing before July 1, 1993, set conditions on a resumption of testing, banned testing after September 1996 unless another nation tested, and required the President to report to Congress annually on a plan to achieve a CTBT by September 30, 1996. President Bush signed the bill into law (P.L. 102-377) October 2, 1992. The CTBT was negotiated in the Conference on Disarmament. It was adopted by the U.N. General Assembly on September 10, 1996, and was opened for signature on September 24, 1996. As of December 16, 2005, 176 states had signed it and 126 had ratified.

## National Positions on Testing and the CTBT

*United States:* Under the Hatfield amendment, President Clinton had to decide whether to ask Congress to resume testing. On July 3, 1993, he said, “A test ban can strengthen our efforts worldwide to halt the spread of nuclear technology in weapons,” and “the nuclear weapons in the United States arsenal are safe and reliable.” While testing offered advantages for safety, reliability, and test ban readiness, “the price we would pay in conducting those tests now by undercutting our own nonproliferation goals and ensuring that other nations would resume testing outweighs these benefits.” Therefore, he (1) extended the moratorium at least through September 1994; (2) called on other nations to extend their moratoria; (3) said he would direct DOE to “prepare to conduct additional tests while seeking approval to do so from Congress” if another nation tested; (4) promised to “explore other means of maintaining our confidence in the safety, the reliability and the performance of our own weapons”; and (5) pledged to refocus the nuclear weapons laboratories toward technology for nuclear nonproliferation and arms control verification. He extended the moratorium twice more; on January 30, 1995, the Administration announced his decision to extend the moratorium until a CTBT entered into force, assuming it was signed by September 30, 1996.

On September 22, 1997, President Clinton submitted the CTBT to the Senate. He asked the Senate to approve it in his State of the Union addresses of 1998 and 1999, but Senator Helms, Chairman of the Senate Foreign Relations Committee, rejected that request on grounds that the treaty “from a non-proliferation standpoint, is scarcely more than a sham” and was of low priority for the committee. In the summer of 1999, Senate Democrats pressed Senators Helms and Lott to permit consideration of the treaty. On September 30, 1999, Senator Lott offered a unanimous-consent request to discharge the Senate Foreign Relations Committee from considering the treaty and to have debate and a vote. The request, as modified, was agreed to. The Senate Armed Services Committee held hearings October 5-7; the Foreign Relations Committee held a hearing October 7. It quickly became clear that the treaty was far short of the votes for approval, leading many on both sides to seek to delay a vote. As the vote was scheduled by unanimous consent, and several Senators opposed a delay, the vote was held October 13, rejecting the treaty, 48 for, 51 against, and 1 present. At the end of the 106<sup>th</sup> Congress, pursuant to Senate Rule XXX, paragraph 2, the treaty moved to the Senate Foreign Relations Committee calendar, where it currently resides.

*The Nuclear Posture Review and Nuclear Testing:* In the FY2001 National Defense Authorization Act (P.L. 106-398, Sec. 1041), Congress directed the Secretary of Defense, in consultation with the Secretary of Energy, to review nuclear policy, strategy, arms control objectives, and the forces, stockpile, and nuclear weapons complex needed to implement U.S. strategy. Although the resulting Nuclear Posture Review is classified, J.D. Crouch, Assistant Secretary of Defense for International Security Policy, presented an unclassified briefing on it on January 9, 2002, dealing in part with the CTBT and nuclear testing. He stated there would be “no change in the Administration’s policy at this point on nuclear testing. We continue to oppose CTBT ratification. We also continue to adhere to a testing moratorium.” Further, “DOE is planning on accelerating its test-readiness program” to reduce the time needed between a decision to test and the conduct of a test, which was then 24 to 36 months. He discussed new weapons. “At this point, there are no recommendations in the report about developing new nuclear weapons. ... we are trying to look at a number of initiatives. One would be to modify an existing weapon, to give it greater capability against ... hard targets and deeply-buried targets. And we’re also looking at non-nuclear ways that

we might be able to deal with those problems.” A *Washington Post* article of January 10, 2002, quoted White House Press Secretary Ari Fleischer as saying that the President has not ruled out testing “to make sure the stockpile, particularly as it is reduced, is reliable and safe. So he has not ruled out testing in the future, but there are no plans to do so.”

Critics expressed concern about the implications of these policies for testing and new weapons. Daryl Kimball, executive director of the Arms Control Association, said that since increasing funding for test readiness “would amount to giving prior approval for testing, the debate [in Congress] would be substantial.” A statement by Physicians for Social Responsibility said, “The Administration’s plan ... would streamline our nuclear arsenal into a war-fighting force, seek the opportunity to design and build new nuclear weapons, and abandon a ten-year-old moratorium on nuclear weapons testing.”

In July 2002 a National Academy of Sciences panel report on technical aspects of the CTBT concluded, in the words of an Academy press release, “that verification capabilities for the treaty are better than generally supposed, U.S. adversaries could not significantly advance their nuclear weapons capabilities through tests below the threshold of detection, and the United States has the technical capabilities to maintain confidence in the safety and reliability of its existing weapons stockpile without periodic nuclear tests.”

A U.N. draft document of August 5, 2005, for signature by heads of government and state at the U.N. General Assembly meeting of September 2005, contained a provision that the signers “resolve to ... [m]aintain a moratorium on nuclear test explosions pending the entry into force of the Comprehensive Nuclear-Test-Ban Treaty and call upon all States to sign and ratify the Treaty.” John Bolton, the U.S. Ambassador to the U.N., reportedly called for major changes to the draft; the CTBT passage was one of many drawing his objection.

*United Kingdom:* The United Kingdom cannot test because it has conducted all its nuclear tests for several decades at the Nevada Test Site and does not have its own test site. Its last test was held in 1991. Britain and France became the first of the original five nuclear weapon states to ratify the CTBT, depositing instruments of ratification with the United Nations on April 6, 1998. On February 14, 2002, the United Kingdom conducted its first subcritical experiment jointly with the United States at the Nevada Test Site.

*France:* On June 13, 1995, President Jacques Chirac announced that France would conduct eight nuclear tests at its test site at Mururoa Atoll in the South Pacific, finishing by the end of May 1996. The armed services had reportedly wanted the tests to check existing warheads, validate a new warhead, and develop a computer system to simulate warheads to render further testing unneeded. Many nations criticized the decision. On August 10, 1995, France indicated it would halt all nuclear tests once the test series was finished and favored a CTBT that “prohibit(ed) any nuclear weapon test explosion or any other nuclear explosion.” France conducted six tests from September 5, 1995, to January 27, 1996. On January 29, 1996, Chirac announced the end to French testing. On April 6, 1998, France and Britain deposited instruments of ratification of the CTBT with the United Nations.

*Russia:* Several press reports between 1996 and 1999 claimed that Russia may have conducted low-yield nuclear tests at its Arctic test site at Novaya Zemlya; other reports stated that U.S. reviews of the data determined that these events were earthquakes. Several reports between 1998 and 2000 stated that Russia had conducted “subcritical” nuclear experiments,

discussed below, which the CTBT does not bar. Russia ratified the treaty on June 30, 2000. In September 2005, Russia reportedly stated that it intends to continue to observe the moratorium on testing until the CTBT enters into force as long as other nuclear powers do likewise, and expressed its hope that the nations that must ratify the treaty for it to enter into force will do so as soon as possible.

*China:* China did not participate in the moratorium. It conducted a nuclear test on October 5, 1993, that many nations condemned. It countered that it had conducted 39 tests, vs. 1,054 for the United States, and needed a few more for safety and reliability. The Chinese government reportedly wrote to U.N. Secretary General Boutros Boutros-Ghali after its test that “after a comprehensive test ban treaty is concluded and comes into effect, China will abide by it and carry out no more nuclear tests.” It conducted other tests on June 10 and October 7, 1994, May 15 and August 17, 1995, and June 8 and July 29, 1996. It announced that the July 1996 test would be its last, as it would begin a moratorium on July 30, 1996. On February 29, 2000, the Chinese government submitted the CTBT to the National People’s Congress for ratification. In a white paper of December 2004, China stated its support of early entry into force and, until that happens, its commitment to the test moratorium. As of January 2006, China had not ratified the treaty.

*India:* On May 11, 1998, Prime Minister Atal Behari Vajpayee announced that India had conducted three nuclear tests. A government statement said, “The tests conducted today were with a fission device, a low yield device and a thermonuclear device. ... These tests have established that India has a proven capability for a weaponised nuclear programme. They also provide a valuable database which is useful in the design of nuclear weapons of different yields for different applications and for different delivery systems.” It announced two more sub-kiloton tests on May 13. An academic study concluded, based on seismic data, that India and Pakistan overstated the number and yields of their tests. India has conducted no tests since May 1998. However, Senator Specter, who visited India and Pakistan in January 2001, stated, “In my discussions with officials, it became evident that securing compliance with the CTBT by these two nations without U.S. ratification would be problematic.” Lalit Mansingh, India’s Foreign Secretary, “expressed his sentiment that the U.S. should not expect India to sign a Treaty that the U.S. itself perceives as flawed.” In an Indian-Pakistani statement of June 20, 2004, “Each side reaffirmed its unilateral moratorium on conducting further nuclear test explosions” barring “extraordinary events.” The sides also agreed, “A dedicated and secure hotline would be established between the two Foreign Secretaries ...” On December 22, 2005, Shri Rao Inderjit Singh, Minister of State in the Ministry of External Affairs, said, “India has already stated that it will not stand in the way of the Entry into Force of the Treaty.” As of January 2006, India had not signed the CTBT.

In a statement on U.S.-Indian cooperation of July 18, 2005, between President Bush and Indian Prime Minister Manmohan Singh, the latter said “India will reciprocally agree that it would be ready to ... continu[e] India’s unilateral moratorium on nuclear testing.” In a Senate hearing of November 2, Robert Joseph, Under Secretary of State for Arms Control and International Security, stated, “India’s pledge to maintain its nuclear testing moratorium contributes to nonproliferation efforts by making its ending of nuclear explosive tests one of the conditions of full civil nuclear cooperation.” At that hearing, Michael Krepon, co-founder of the Stimson Center, argued that statements by Indian government officials that there are no current plans to test “do not carry equal weight, nor do they impose equal responsibility, to the obligations accepted by the 176 states that have signed the CTBT.”

*Pakistan:* Pakistan announced on May 28, 1998, that it had conducted five nuclear tests, and announced a sixth on May 30. Reports placed the yields of the smallest devices between zero and a few kilotons, and between 2 and 45 kilotons for the largest. Some question the number of tests based on uncertain seismic evidence. Pakistan made no claims of testing fusion devices. Pakistan's weapons program apparently relies heavily on foreign technology. Pakistan claimed that it tested "ready-to-fire warheads," not experimental devices, and included a warhead for the Ghauri, a missile with a range of 900 miles, and low-yield tactical weapons. In response to the Indian and Pakistani tests, the United States imposed economic sanctions on the two nations. In November 1999, Foreign Minister Abdul Sattar said that his nation would not sign the CTBT unless sanctions were lifted, but that "[w]e will not be the first to conduct further nuclear tests." In August 2000, President Pervez Musharraf said the time was not ripe to sign the CTBT because so doing could destabilize Pakistan. As of January 2006, Pakistan had not signed the CTBT, but in September 2005 reportedly said it would not be the first nation in the region to resume nuclear testing.

*North Korea:* Negotiations to halt North Korea's nuclear program have been underway for years, most recently between that nation, the United States, China, Japan, South Korea, and Russia. A CIA report of late 2004 stated that during talks in April 2003, "North Korea privately threatened to 'transfer' or 'demonstrate' its nuclear weapons." On February 10, 2005, North Korea declared, "We ... have manufactured nukes for self-defense to cope with the Bush Administration's evermore undisguised policy to isolate and stifle the DPRK," and on June 9 it claimed it was building more such weapons. Many press reports have raised the possibility that that nation, which has not signed the CTBT, might conduct a nuclear test, but as of January 2006 no such test had been reported. On May 15, the United States warned that it and other nations would take punitive action if North Korea conducted a nuclear test. (See CRS Issue Brief IB91141, *North Korea's Nuclear Weapons Program*, by Larry A. Niksch.)

## **The CTBT: Negotiations and Key Provisions**

The Conference on Disarmament, or CD, calls itself "the sole multilateral disarmament negotiating forum of the international community." It is affiliated with, funded by, yet autonomous from the United Nations. It operates by consensus; each member state can block a decision. On August 10, 1993, the CD gave its Ad Hoc Committee on a Nuclear Test Ban "a mandate to negotiate a CTB." On November 19, 1993, the United Nations General Assembly unanimously approved a resolution calling for negotiation of a CTBT. The CD's 1994 session opened in Geneva on January 25, with negotiation of a CTBT its top priority.

The priority had to do with extension of the Nuclear Non-Proliferation Treaty (NPT). That treaty entered into force in 1970. It divided the world into nuclear "haves" — the United States, Soviet Union, Britain, France, and China, the five declared nuclear powers, which are also the permanent five ("P5") members of the U.N. Security Council — and nuclear "have-nots." The P5 would be the only States Party to the NPT to have nuclear weapons, but they (and others) would negotiate in good faith on halting the nuclear arms race soon, on nuclear disarmament, and on general and complete disarmament. Nonnuclear weapon states saw attainment of a CTBT as the touchstone of good faith on these matters. The NPT provided for reviews every five years; a review in 1995, 25 years after it entered into force, would determine whether to extend the treaty indefinitely or for one or more fixed periods. The Review and Extension Conference of April-May 1995 extended the treaty indefinitely. Extension was accompanied by certain non-binding measures, including a

Decision on Principles and Objectives for Nuclear Non- Proliferation and Disarmament that set forth goals on universality of the NPT, nuclear weapon free zones, etc., and stressed the importance of completing “the negotiations on a universal and internationally and effectively verifiable Comprehensive Nuclear-Test-Ban Treaty no later than 1996.”

The extension decision, binding on States Party to the NPT, was contentious. Nonnuclear States Party argued that the P5 failed to meet their NPT obligations by not concluding a CTBT. They saw progress on winding down the arms race as inadequate. They assailed the NPT as discriminatory because it divides the world into nuclear and nonnuclear states, and argued for a regime in which no nation has nuclear weapons. The CTBT, in their view, symbolized this regime because, unlike the NPT, the P5 would give up something tangible, the ability to develop new sophisticated warheads. Some nonnuclear states saw NPT extension as their last source of leverage for a CTBT. Other nonnuclear states felt that the NPT was in the interests of all but would-be proliferators, that anything less than indefinite extension would undermine the security of most nations, and that the NPT was too important to put at risk as a means of pressuring the P5 for a CTBT. The explicit linkage finally drawn between CTBT and NPT lent urgency to negotiations on the former.

The CD reached a draft treaty in August 1996. India argued that the CTBT “should be securely anchored in the global disarmament context and be linked through treaty language to the elimination of all nuclear weapons in a time-bound framework.” India also wanted a treaty to bar weapons research not involving nuclear tests. The draft treaty did not meet these conditions, which the nuclear weapon states rejected, so India vetoed it at the CD on August 20, barring it from going to the U.N. General Assembly as a CD document. As an alternate way to open the treaty for signing, Australia on August 23 asked the General Assembly to consider a resolution to adopt the draft CTBT text and for the Secretary-General to open it for signing so it could be adopted by a simple majority, or by the two-thirds majority that India sought, avoiding the need for consensus. A potential pitfall was that the resolution (the treaty text) was subject to amendment, yet the nuclear weapon states viewed amendments as unacceptable. India did not raise obstacles to the vote, which was held September 10, with 158 nations in favor, 3 against (India, Bhutan, and Libya), 5 abstentions, and 19 not voting.

A sixth 5-year NPT review conference was held April 24-May 19, 2000, in New York. U.S. rejection of the CTBT, lack of Chinese ratification, U.S. efforts to seek renegotiation of the ABM Treaty, and efforts to ban nuclear weapons in the Middle East led some to fear dire outcomes from the conference. However, some contentious issues were ironed out, some were avoided, and concessions were made. For example, a joint statement by the P5 to the conference on May 1 said, “No effort should be spared to make sure that the CTBT is a universal and internationally and effectively verifiable treaty and to secure its earliest entry into force.” As a result of effort by many nations, the final document of the conference was adopted by consensus. The document included a 13-step Nuclear Disarmament Plan of Action, the first two elements of which called for the early entry into force of the treaty and a moratorium on nuclear explosions pending entry into force.

At the NPT Review Conference of May 2005, the CTBT was a point of contention. For example, Alberto Romulo, Secretary of Foreign Affairs, Republic of the Philippines, said, “Plans to develop new nuclear weapons technology and failure to bring the Comprehensive Test Ban Treaty (CTBT) into force seriously erode the historic foundations of the NPT.” Ihor Dolhov, Deputy Foreign Minister for Foreign Affairs of Ukraine, said, “Ukraine continues

to underscore the importance and urgency of an early entry into force of the Treaty and calls upon all States who have not yet done so to adhere to the Treaty without delay and unconditionally...” Ambassador Ronaldo Sardenberg of Brazil said, “Brazil has consistently called for the universalization of the CTBT, which we consider to be an essential element of the disarmament and non-proliferation regime.” (See CRS Report RL32857, *The Nuclear Nonproliferation Treaty Review Conference: Issues for Congress*, by Sharon Squassoni and Carl E. Behrens.)

The balance of this section summarizes key CTBT provisions. See “*Comprehensive Nuclear Test-Ban Treaty: Message from the President ...*,” cited below, for details.

*Scope* (Article I): The heart of the treaty is the obligation “not to carry out any nuclear weapon test explosion or any other nuclear explosion.” This formulation bars even very low yield tests, as some in the nuclear weapon states had wanted, and bars peaceful nuclear explosions, as China had wanted, but rejects India’s concern that a CTBT should “leave no loophole for activity, either explosive-based or non-explosive based, aimed at the continued development and refinement of nuclear weapons.”

*Organization* (Article II): The treaty establishes a Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO), composed of all member states, to implement the treaty. Three groups are under this Organization. The Conference of States Parties, composed of a representative from each member state, shall meet in annual and special sessions to consider and decide issues within the scope of the treaty and oversee the work of the other groups. An Executive Council with 51 member States shall, among other things, take action on requests for on-site inspection, and may request a special session of the Conference. A Technical Secretariat shall carry out verification functions, including operating an International Data Center, processing and reporting on data from an International Monitoring System, and receiving and processing requests for on-site inspections.

*Verification* (Article IV): The treaty establishes a verification regime. It provides for collection and dissemination of information, permits States Party to use national technical means of verification, and specifies verification responsibilities of the Technical Secretariat. It establishes an International Monitoring System (IMS) with 321 stations in 90 countries, provides for consultation on “possible non-compliance,” and provides for on-site inspections. As of November 2004, 304 site surveys had been completed. As of December 31, 2004, 119 stations had been certified, and 204 had been completed or fully upgraded to specifications.

*Review of the Treaty* (Article VIII): The treaty provides for a conference ten years after entry into force (unless a majority of States Party decide not to hold such a conference) to review the treaty’s operation and effectiveness. Further review conferences may be held at subsequent intervals of ten years or less.

*Duration and Withdrawal* (Article IX): “This treaty shall be of unlimited duration.” However, “Each State Party shall, in exercising its national sovereignty, have the right to withdraw from this Treaty if it decides that extraordinary events related to the subject matter of this Treaty have jeopardized its supreme interests.” President Clinton indicated his possible willingness to withdraw from the Treaty using this withdrawal provision, which is common to many arms control agreements, in his speech of August 11, 1995, discussed below, as one of several conditions under which the United States would enter the CTBT.

*Entry into force* (Article XIV): The treaty shall enter into force 180 days after 44 states named in Annex 2 have deposited instruments of ratification, but not less than two years after the treaty is opened for signature. If the treaty has not entered into force three years after being opened for signature, and if a majority of states that have deposited instruments of ratification so desire, a conference of these states shall be held to decide how to accelerate ratification. Unless otherwise decided, subsequent conferences of this type shall be held annually until entry into force occurs. The 44 states are the ones with nuclear reactors that participated in the work of the CD's 1996 session and were CD members as of June 18, 1996. This formulation includes nuclear-capable states and nuclear threshold states (in particular Israel, which, along with other States, joined the CD on June 17, 1996), and excludes Yugoslavia. Of the 44, three states — India, North Korea, and Pakistan — had not signed the treaty and 11 had not ratified it as of January 2006.

*Protocol:* The Protocol provides details on the International Monitoring System and on functions of the International Data Center (Part I); spells out on-site inspection procedures in great detail (Part II); and provides for certain confidence-building measures (Part III). Annex 1 to the Protocol lists International Monitoring System facilities: seismic stations, radionuclide stations and laboratories, hydroacoustic stations, and infrasound stations. Annex 2 provides a list of variables that, among others, may be used in analyzing data from these stations to screen for possible explosions.

## **Preparing for Entry into Force**

States that had signed the CTBT established the Preparatory Commission (PrepCom) for the Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO) to prepare for entry into force of the treaty, such as by creating the structures and instruments of the CTBT. The PrepCom states that its main task “is to establish the global verification regime foreseen in the Treaty so that it will be operational by the time the Treaty enters into force.” The PrepCom held 25 meetings from November 1996 through November 2005, the next is scheduled for June 20-23, 2006. Eight meetings of CTBTO working groups and advisory groups are scheduled for 2006. CTBTO also holds training sessions, workshops, etc.

The only funding the United States provides to the PrepCom is as follows (budget authority): FY2002 actual, \$16.6 million; FY2003 actual, \$18.2 million; FY2004 appropriation, \$19.0 million; FY2005 appropriation, \$19.0 million; FY2006 appropriation, \$14.4 million. These funds are in the International Affairs Function 150 budget in Nonproliferation, Antiterrorism, Demining, and Related Programs (NADR). The FY2005 budget justification states that these funds “pay the U.S. share for the ongoing development and implementation of the international monitoring system (IMS), which supplements U.S. capabilities to detect nuclear explosions. Since the United States does not seek ratification and entry-into-force of the CTBT, none of the funds will support Preparatory Commission activities that are not related to the IMS.” The FY2006 foreign operations conference report urged the State Department “to include sufficient funds for CTBT” in the FY2007 request.

Entry-into-force conferences under Article XIV were held in October 1999, November 2001, September 2003, and September 2005, and there have been other calls for entry into force. In September 2002, a statement by 18 foreign ministers, including those of Britain, France, and Russia, called for early entry into force. On November 22, 2002, the U.N. General Assembly adopted resolution 57/100 (164 for, 1 against (U.S.A.), 5 abstentions)

urging states to maintain their nuclear test moratoria and urging states that had not signed and ratified the CTBT to do so as soon as possible and to avoid actions that would defeat its object and purpose. In a message to the 2003 conference, U.N. Secretary-General Kofi Annan urged the nations that had to ratify the treaty for it to enter into force, and especially North Korea, to ratify, and urged continuing the moratorium: "No nuclear testing must be tolerated under any circumstances." A conference of the Non-Aligned Movement, which has 116 members, ended on February 25, 2003. Its Final Document stated that the heads of state or government "stressed the significance of achieving universal adherence to the Comprehensive Nuclear-Test-Ban Treaty (CTBT), including by all the Nuclear Weapons States." On September 23, 2004, foreign ministers from 42 nations called for prompt ratification of the CTBT, especially by nations whose ratification is required for entry into force. The Article XIV conference of 2005 adopted its draft final declaration, which called on all states to sign and ratify the treaty "without delay," especially those states required for entry into force, and adopted 12 measures to promote entry into force.

## **Stockpile Stewardship**

P5 states want to maintain their nuclear warheads under a CTBT and assert that they need computers and scientific facilities to do so. They also want to retain the ability to resume testing if other nations leave a CTBT, or if maintaining high confidence in key weapons requires testing. Nonnuclear nations fear that the P5 will continue to design new warheads under a CTBT, with computation and nonnuclear experiments replacing testing. Maintaining nuclear weapons, especially without testing, is termed "stockpile stewardship." This is a contentious issue. This section focuses on the U.S. debate.

Stewardship bears on Senate advice and consent to CTBT ratification. Beginning with the Nuclear Test Ban Treaty of 1963, the United States has implemented "safeguards," or unilateral steps to maintain its nuclear weapons capability consistent with treaty limitations. President Kennedy's agreement to safeguards was critical for obtaining Senate approval of the 1963 treaty. The safeguards were modified most recently by President Clinton. In his August 11, 1995, speech announcing a zero-yield CTBT as a goal, he stated:

As a central part of this decision, I am establishing concrete, specific safeguards that define the conditions under which the United States will enter into a comprehensive test ban. These safeguards will strengthen our commitments in the areas of intelligence, monitoring and verification, stockpile stewardship, maintenance of our nuclear laboratories, and test readiness.

These safeguards are: Safeguard A: "conduct of a Science Based Stockpile Stewardship program to insure a high level of confidence in the safety and reliability of nuclear weapons in the active stockpile"; Safeguard B: "maintenance of modern nuclear laboratory facilities and programs"; Safeguard C: "maintenance of the basic capability to resume nuclear test activities prohibited by the CTBT"; Safeguard D: "a comprehensive research and development program to improve our treaty monitoring"; Safeguard E: intelligence programs for "information on worldwide nuclear arsenals, nuclear weapons development programs, and related nuclear programs"; and Safeguard F: the understanding that if the Secretaries of Defense and Energy inform the President "that a high level of confidence in the safety or reliability of a nuclear weapon type which the two Secretaries consider to be critical to our nuclear deterrent could no longer be certified, the President, in consultation with Congress,

would be prepared to withdraw from the CTBT under the standard ‘supreme national interests’ clause in order to conduct whatever testing might be required.”

Regarding the stewardship program, President Clinton said that the Secretary of Energy and the directors of the nuclear weapons laboratories had assured him that the United States could maintain its nuclear deterrent under a CTBT through a program of science-based stockpile stewardship. “In order for this program to succeed,” he said, “both the administration and the Congress must provide sustained bipartisan support for the stockpile stewardship program over the next decade and beyond.”

The ability of the stewardship program to maintain nuclear weapons without testing was a crucial issue in the Senate debate on the CTBT. The treaty’s opponents claimed that stewardship offered no guarantee of maintaining weapons, and that experiments, computer models, and other techniques might offer no clue to some problems that develop over time. They further argued that it could be perhaps a decade before the tools for the program were fully in place, and by that time many weapon designers with test experience would have retired. Supporters held that the program was highly likely to work, having already certified the stockpile three times, and that safeguard “F” provided for U.S. withdrawal from the treaty in the event high confidence in a key weapon type could not be maintained without testing. By March 2005, DOD and DOE had completed the ninth stockpile certification.

Congress established the National Nuclear Security Administration (NNSA) in 1999 as a semiautonomous DOE agency to manage stewardship and related programs. In NNSA’s budget, stewardship is funded by the Weapons Activities account, the main elements of which are Directed Stockpile Work, activities directly supporting weapons in the stockpile; Campaigns, technical efforts to develop and maintain capabilities to certify the stockpile for the long term; and Readiness in Technical Base and Facilities, mainly infrastructure and operations for the weapons complex. Appropriations were: FY2001, \$5.006 billion; FY2002, \$5.429 billion; FY2003, \$5.954 billion; FY2004, \$6.447 billion; FY2005, \$6.526 billion; and FY2006, \$6.434 billion. (See CRS Report RL32852, *Energy and Water Development: FY2006 Appropriations*, coordinated by Carl E. Behrens.)

*Subcritical experiments (SCEs):* As part of the stockpile stewardship program, NNSA is conducting SCEs. CRS offers the following definition based on documents and on discussions with DOE and laboratory staff: “Subcritical experiments at Nevada Test Site involve chemical high explosives and fissile materials in configurations and quantities such that no self-sustaining nuclear fission chain reaction can result. In these experiments, the chemical high explosives are used to generate high pressures that are applied to the fissile materials.” The only fissile material that has been used in SCEs is plutonium-239. SCEs are held in a tunnel complex, about 1,000 feet underground at Nevada Test Site. The complex could contain explosions up to 500 pounds of explosive and associated plutonium. These experiments try to determine if radioactive decay of aged plutonium would degrade weapon performance. They have been used to support certification of the W88 pit. (A pit is the “trigger” of a thermonuclear weapon.) In 1998, Secretary of Energy Bill Richardson called SCEs “a key part of our scientific program to provide new tools and data that assess age-related complications and maintain the reliability and safety of the nation’s nuclear deterrent.” As they produce no chain reaction, the Clinton Administration saw them as consistent with the CTBT. Critics counter that they would help design new weapons without testing; are unnecessary; may look like nuclear tests if not monitored intrusively; and are

inconsistent with the spirit of a CTBT, which, critics believe, is aimed at halting nuclear weapons development, not just testing. NNSA states that most subcritical experiments cost between \$15 million and \$25 million, with some costing as little as \$5 million or as much as \$60 million. (For further information on subcritical experiments and test readiness, see CRS Report RL32130, *Nuclear Weapon Initiatives: Low-Yield R&D, Advanced Concepts, Earth Penetrators, Test Readiness*, by Jonathan Medalia.)

The 21 SCEs held so far are: 1997: Rebound, July 2; Holog, September 18; 1998: Stagecoach, March 25; Bagpipe, September 26; Cimarron, December 11; 1999: Clarinet, February 9; Oboe, September 30; Oboe 2, November 9; 2000: Oboe 3, February 3; Thoroughbred, March 22; Oboe 4, April 6; Oboe 5, August 18; Oboe 6, December 14; 2001: Oboe 8, September 26; Oboe 7 (held after Oboe 8), December 13; 2002: Vito (jointly with U.K.), February 14; Oboe 9, June 7; Mario, August 29; Rocco, September 26; 2003: Piano, September 19; 2004: Armando, May 25. In its FY2006 request, NNSA stated that, for pit certification, “The major activities in FY2006 include the preparation and execution of subcritical experiments to confirm nuclear performance of the W88 warhead with a newly-manufactured pit.”

*Test Readiness:* President Clinton directed DOE to be prepared to conduct a nuclear test within three years of a decision to do so. Yet a September 2002 report by DOE’s Office of Inspector General found this ability “at risk.” In January 2002 the Nuclear Posture Review briefing called for an unspecified acceleration of nuclear test readiness, and in March 2002 the Panel to Assess the Reliability, Safety, and Security of the United States Nuclear Stockpile assessed that “test readiness should be no more than three months to a year.” The FY2003 National Defense Authorization Act, P.L. 107-314, sec. 3142, required the Secretary of Energy to report on alternative test readiness postures and recommend the optimal readiness posture. The resulting report argued that the three-year posture was increasingly at risk, “[a]t the time of an active underground test program, 18 months was a minimal time to design and prepare most tests,” and readiness times shorter than 18 months had “additional costs and impacts to other stockpile stewardship missions.” Accordingly, it recommended moving to an 18-month readiness posture by the end of FY2005.

The FY2004 Weapons Activities request included \$24.9 million to reduce from three years to 18 months the time needed to resume testing. The National Defense Authorization Act and the Energy and Water Development Appropriations Act provided the funds requested. Conferees on the latter expected NNSA to focus on a program that can meet the current 24-month requirement “before requesting significant additional funds to pursue a more aggressive goal of an 18-month readiness posture.” In contrast, the FY2004 National Defense Authorization Act (P.L. 108-136, sec. 3112) stated, “Commencing not later than October 1, 2006, the Secretary of Energy shall achieve, and thereafter maintain, a readiness posture of not more than 18 months for resumption by the United States of underground tests of nuclear weapons.”

In testimony before the Senate Armed Services Committee on March 24, 2004, NNSA Administrator Linton Brooks said that the goal of test readiness “is to achieve an 18-month test readiness posture as directed by the Defense Authorization Act.” The FY2005 National Defense Authorization Act provided the full \$30.0 million requested for test readiness. In the FY2005 energy and water bill, The House Appropriations Committee recommended reducing the Primary Assessment Technologies campaign request of \$81.5 million, which

included \$30.0 million for test readiness, by \$15.0 million “to limit the enhanced test readiness initiative to the goal of achieving a 24-month test readiness posture. The Committee continues to oppose the 18-month test readiness posture.” The House passed this bill without amending the Weapons Activities section. The FY2005 Consolidated Appropriations Act reduced this campaign by \$7.5 million.

The FY2006 request for test readiness is \$25.0 million; NNSA states, “Funds are requested to continue improving the state of readiness to reach an 18-month test readiness posture in FY2006.” In a hearing before the Senate Armed Services Committee on February 15, 2005, Senator John Warner asked Secretary of Energy Samuel Bodman whether DOE would meet the 18-month test readiness requirement by October 1, 2006. Secretary Bodman replied, “We continue to be committed to that requirement of the law” and was informed that DOE is on track to meet the October 1 deadline. In testimony before the Senate Appropriations Committee’s Energy and Water Development Subcommittee on April 14, 2005, Administrator Brooks explained the rationale for the 18-month posture: “Shorter than that, and you were paying money for readiness you couldn’t use, because the experiment [the nuclear test] wouldn’t be ready. Longer than that, and you were running the risk of being ready to test to find out whether you had corrected an important problem, but the test site wasn’t ready.” The House Appropriations Committee continued to favor a 24-month posture and stated that the Reliable Replacement Warhead program “obviates any reason to move to a provocative 18-month test readiness posture.” The Energy and Water Development Appropriations Act reduced test readiness funding to \$20.0 million; the conference bill directed DOE to maintain the 24-month test readiness posture. The National Defense Authorization Act also provided \$20.0 million; the accompanying conference report did not address the readiness posture. (See Legislation, below, and CRS Report RL32929, *Nuclear Weapons: Reliable Replacement Warhead Program*, by Jonathan Medalia.)

### U.S. Nuclear Tests by Calendar Year

1945-1949	6	1960-1964	202	1980-1984	92
1950-1954	43	1965-1969	231	1985-1989	75
1955-1959	145	1970-1974	137	1990-1992	23
		1975-1979	100	Total	1054

**Source:** U.S. Department of Energy.

**Note:** These figures include all U.S. nuclear tests, of which 24 were U.K. tests conducted at the Nevada Test Site between 1962 and 1991. They reflect data on unannounced tests that DOE declassified on December 7, 1993. They exclude the two atomic bombs that the United States dropped on Japan in 1945. On June 27, 1994, Secretary O’Leary announced that DOE had redefined three nuclear detonations (one each in 1968, 1970, and 1972) as separate nuclear tests. This table reflects these figures. She also declassified the fact that 63 tests, conducted from 1963 through 1992, involved more than one nuclear explosive device.

## CTBT Pros and Cons

A CTBT is contentious. Supporters argue it would fulfill disarmament commitments the nuclear weapon states made in the Nuclear Nonproliferation Treaty and its 1995 Review and Extension Conference; end a discriminatory regime in which nuclear weapon states can test while others cannot; and aid nonproliferation by preventing nonnuclear weapon states

from developing nuclear weapons of advanced design. Some supporters hold a CTBT would freeze a U.S. advantage in nuclear weaponry and that the stockpile stewardship program can maintain U.S. weapons without testing. A CTBT, it is argued, would also prevent the development of weapons of advanced design by the P5, reducing future threats to the United States, and impede India's ability to develop a thermonuclear weapon. Some hold the treaty would bar China from incorporating any lessons learned from espionage into new warheads.

Critics see testing as the one sure way to maintain confidence in the reliability and safety of U.S. nuclear weapons. They contend that if friends and allies doubt U.S. nuclear capability, they might feel compelled to develop their own nuclear weapons. Some opponents believe that a CTBT would undercut confidence in the U.S. deterrent, increasing the incentive for rogue states to obtain nuclear weapons. Critics also charge that nations wanting to develop nuclear weapons would likely not sign a CTBT and in any event could develop fairly sophisticated weapons without testing; that verification would be difficult; and that the United States might need to develop new weapons to meet new threats. If other nations become nuclear powers or if existing ones develop new weapons, the proper response, in this view, is ballistic missile defense. (For a more detailed discussion, see CRS Report RS20351, *Comprehensive Test Ban Treaty: Pro and Con*, by Jonathan Medalia.)

## LEGISLATION

**H.R. 1815 (Hunter).** National Defense Authorization Act for FY2006. Reported from House Armed Services Committee (H.Rept. 109-89) May 20, 2005. Measure passed House, amended, 390-39, May 25. The bill provided the amount requested, \$25.0 million, for test readiness. Section 3111 set as an objective of the Reliable Replacement Warhead (RRW) program to make nuclear testing less likely, and required a report on the program to, among other things, "discuss the criteria by which replacement warheads under the Reliable Replacement Warhead program will be designed to maximize the likelihood of not requiring nuclear testing, as well as the circumstances that could lead to a resumption of testing." Measure reported from conference (H.Rept. 109-360) December 18. The conference bill contained \$20.0 million for test readiness. Senate conferees accepted the House position on goals for RRW with a technical amendment. Conferees stated that the RRW program is essential to achieving a safe, secure, and reliable nuclear stockpile, and supported establishing that program. Measure signed into law (P.L. 109-163) January 6, 2006.

**H.R. 2419 (Hobson).** Energy and Water Development Appropriations Bill, FY2006. Reported from House Appropriations Committee (H.Rept. 109-86) May 18, 2005; passed House, 416-13, May 24. It reduced test readiness funding by \$10.0 million. The report stated, "The Committee continues to oppose the 18-month test readiness posture and refers the Department [of Energy] to the unambiguous language provided in the reports accompanying the FY2004 and 2005 Appropriation Acts requiring the Department to maintain the current 24-month test readiness posture. The initiation of the Reliable Replacement Warhead (RRW) program designed to provide for the continuance of the existing moratorium on underground nuclear testing by insuring the long-term reliability of the nuclear weapons stockpile obviates any reason to move to a provocative 18-month test readiness posture." The conference bill, reported (H.Rept. 109-275) November 7, reduced test readiness funding by \$5.0 million and directed DOE to maintain the 24-month test readiness posture. Measure signed into law (P.L. 109-103) November 19.

**S. 1042 (Warner).** National Defense Authorization Act for FY2006. Reported from Senate Armed Services Committee (S.Rept. 109-69) May 17, 2005. The committee recommended \$25.0 million for test readiness. The report stated that the committee understands from NNSA testimony that a goal of the RRW program is to develop replacement components for warheads “on a schedule that would reduce the possibility that the United States would ever be faced with the need to conduct a nuclear test in order to diagnose or remedy a reliability problem in the current stockpile.” Measure passed Senate, amended, 98-0, on November 15.

**H.R. 2419 (Domenici).** Energy and Water Appropriations Bill, 2006. Reported from Senate Appropriations Committee (S.Rept. 109-84) June 16, 2005. The committee recommended \$25.0 million for test readiness. Senate passed measure, amended, 92-3, on July 1; no amendments affected test readiness.

## CHRONOLOGY

- 12/08/05** — The U.N. General Assembly adopted, 168-2, a resolution on nuclear disarmament that, among other things, urged nations to ratify the CTBT.
- 12/01/05** — Haiti became the 126<sup>th</sup> nation to ratify the CTBT.
- 11/00/05** — The 25<sup>th</sup> meeting of the CTBTO Preparatory Commission was held November 14-18 in Vienna, Austria.
- 9/00/05** — A conference, Facilitating the Entry into Force of the Comprehensive Nuclear Test Ban Treaty, was held September 21 to 23 at U.N. Headquarters.
- 8/29/05** — Egyptian Foreign Minister Ahmed Aboul Gheit reportedly stated that Egypt would not ratify the CTBT until Israel joins the NPT.
- 5/16/05** — The *New York Times* reported that on May 15 National Security Advisor Stephen Hadley stated, “Action would have to be taken” if North Korea conducted a nuclear test. The article also reported that Secretary General Shinzo Abe of Japan’s Liberal Democratic Party said if North Korea “conducts nuclear testing, for instance, Japan will naturally bring the issue to the U.N. and call for sanctions against North Korea.”
- 5/00/05** — At the Nuclear Nonproliferation Treaty Review Conference, held May 2 to 27, some nations criticized the United States for not ratifying the CTBT.
- 3/10/05** — The European Parliament passed a resolution that, among other things, “reiterates its call for the USA ... to sign and ratify the CTBT.”
- 2/10/05** — North Korea declared, “We ... have manufactured nukes for self-defense to cope with the Bush Administration’s evermore undisguised policy to isolate and stifle the DPRK.”

For earlier chronology, see CRS Report 97-1007, *Nuclear Testing and Comprehensive Test Ban: Chronology Starting September 1992*, by Jonathan Medalia.
